Disappointment vs. Annoyance

Disappointment reflects a **deeper and stronger negative emotional response**.
It typically arises when **expectations are not met** and often concerns **multiple qualities or the overall performance of an aspect**. The tone suggests a sense of *let-down* rather than momentary irritation.

Annoyance reflects a **milder, more situational negative reaction**.
It usually refers to **one specific issue, incident, or short-lived situation** within an aspect. The attitude is irritated or frustrated, but **not strongly negative** and not focused on the aspect as a whole.
